Summary

Data Analyst transitioning from a software engineering background with 5+ years of experience. Skilled in SQL, Python, and Power BI, with hands-on experience in data analysis projects involving segmentation, cohort analysis, and anomaly detection. Passionate about leveraging data to support business decisions.

Education

University of Technology and Education Ho Chi Minh City (UTE)

Ho Chi Minh City, Viet Nam

Bachelor of Computer Engineering

2015 - 2019

- Graduated with Distinction

Experience

Senior Software Engineer

Renesas Design Vietnam

May 2019 – Apr 2025

- Developed and optimized MCAL modules for automotive chipsets, improving system stability and ensuring compliance with cross-functional requirements
- Automated testing processes using Python scripts (UT, IT), increasing testing efficiency and reducing manual effort
- Performed debugging and issue analysis, contributing to improved product quality and reduced defect rates
- Tracked project progress, test results, and issues to support stakeholder reporting and decision-making

Projects

Anomaly Detection for Fraud Risk in Banking Data

Data Analyst (End-to-End Project) | Python, Power BI | 2025–2026

GitHub: [Power BI Dashboard and Notebook](#)

Description:

- Analyzed **50,000+ banking transactions** using EDA, RFM segmentation, CLV, and cohort analysis to uncover customer behavior patterns
- Built and evaluated unsupervised anomaly detection models (Isolation Forest, LOF, K-Means) to identify potential fraud signals
- Developed interactive **Power BI dashboards** to monitor transaction trends, anomalies, and key business metrics
- Identified behavioral differences between normal and anomalous transactions to support fraud risk analysis
- Provided actionable insights and recommendations for fraud monitoring and customer retention strategies

Superstore Sales Analytics

Data Analyst (End-to-End Project) | Python, Power BI | 2025–2026

GitHub: [Power BI Dashboard and Notebook](#)

Description

- Analyzed ~10,000 retail transactions to evaluate sales performance, profitability, and customer behavior using EDA and business metrics.
- Applied RFM segmentation, cohort analysis, and Pareto (80/20) analysis to identify high-value customers and revenue drivers.

- Performed QoQ growth analysis to uncover sales trends, seasonality, and performance fluctuations across regions and categories.
 - Built customer segmentation models (K-Means) to group customers based on purchasing behavior and spending patterns.
 - Delivered actionable insights on retention, discount impact, and regional strategy to support data-driven business decisions.
-

Bank Marketing

Data Analyst (End-to-End Project) | Python| 2026

GitHub: [Notebook](#)

Description

- Analyzed large-scale banking data (**45K+ records**) to identify key drivers of term deposit subscriptions.
- Developed and compared machine learning models (XGBoost, LightGBM, Catboost,...) for customer conversion prediction.
- Evaluated models using cross-validation and metrics including ROC-AUC.
- Provided actionable insights on customer segmentation and campaign optimization to improve marketing effectiveness.

Technical Skills

- **Programming:** Python, SQL
- **Data Engineering:** Data Cleaning, ETL Pipelines (Basic), Data Modeling
- **Tools:** Power BI, Apache Spark, Databricks (Basic), Git, JIRA
- **Databases:** SQL Server, MySQL
- **Methodologies:** Agile/Scrum

Certification

- Microsoft SQL Server Professional | [Certificate](#)
- Kaggle Notebook Expert | [Đào Minh Thuận](#)
- Data Analyst – MindX.
